### Working Together for Safe Drinking Water

*by Kim Pickett & Gary Rager, Public Utilities*

Precautionary measures are being taken by the Sandy City Public Utilities Department to provide and protect our public drinking water supplies. As a customer connecting to the public water supply, you share in the responsibility along with Public Utilities to assist in protecting the water supply. The safety and quality of your drinking water may be seriously affected by contaminant's and pollutants from backflow through an unprotected cross connection; therefore, following the necessary guidelines listed below will help to eliminate these potential hazards.

Outdoor sprinkler systems pose the biggest potential problem for drinking water system contamination. Therefore, **ALL** landscaping sprinkling systems, new or existing **SHOULD BE** equipped with backflow protection that is tested and approved. These backflow preventers will protect the health of your families and neighbors. There are various types of backflow prevention devices and assemblies that are approved depending on the style of your sprinkler system. It is recommended that these systems are tested annually to ensure proper operation.

For more information, please visit the city website at www.sandy.utah.gov under Public Utilities and Backflow Prevention or contact Gary Rager at 352-4402
